

XTRAGRASS HYBRID SYSTEM COMBINES NATURAL AND ARTIFICIAL GRASS FOR THE BEST OF BOTH WORLDS

Quick installation and play with XtraGrass farmed turf rolls

XTRAGRASS®

Key benefits:

- Synthetic addition to natural grass increases play hours
- Increased surface stability due to enhanced artificial coverage
- No waiting time – farm turf rolls available
- 1-step recycling – backing and fibres part of the same polymer family

GreenFields XtraGrass unites the positive properties of natural grass with the strength and durability of artificial turf, providing an elite playing surface for sports with a year-round green appearance.

The synthetic turf fibres are woven into a partially biodegradable backing which creates a resistant structure to support the pitch. The open matrix allows the grass plant roots to grow through the fabric and to access moisture and nutrients. Alternatively, if time is an issue XtraGrass can be installed as farmed turf rolls and play is possible within a matter of days.

Players can train on the pitch where they play matches giving them an increased advantage plus there is a reduced risk of injury from a consistently stable surface.

XtraGrass is ideal for stadiums where artificial grass is not possible and for improving the resilience of natural grass pitches in high wear areas such as goal mouths.

“

Not only does the pitch at the Ricoh look good all year round, there's much more stability under foot in the middle of a scrum.
